Dear Colleagues,

Burning Mouth Syndrome (BMS) remains a significant clinical and scientific challenge due to its complex pathophysiology, diverse clinical manifestations, and the limitations of current treatment options.

Advances in neuroscience, pain research, and emerging diagnostic tools are opening new avenues for understanding this condition. At the same time, growing interest in biomarkers, precision medicine, and novel therapeutic approaches offers new opportunities to improve its management.

This Special Issue aims to bring together original research and review articles offering fresh perspectives on the pathophysiology, diagnosis, and treatment of BMS. We welcome clinical, basic, and translational studies, as well as research exploring associated factors, quality of life, emerging technologies, and innovative treatment strategies.

Through this Special Issue, we hope to encourage interdisciplinary collaboration, advance our understanding of BMS, and ultimately improve patient care.

Kind regards,
Assoc. Prof. Dr. pia López Jornet
